

# Care Management Programs

## What To Know

Chorus Community Health Plans provides free, voluntary care management programs designed around our members. These programs connect members with support to make sure they get the care they need. Here's what you should know.

### Program-Specific Support

We offer a variety of programs to help support our members' specific conditions. These include:

- Asthma
- Behavioral Health
- Diabetes
- Pregnancy
- Social Navigation
- Transitional Care

### Care Management Team

We offer a care team that provides members with education, self-management support and connection to resources. A care manager is able to:

- Help members understand their condition and guide them through a treatment plan
- Assist in connecting the member with doctors and specialists
- Assist in getting medicines and treatments
- Help with transportation resources for doctor appointments
- Assist in connecting members to community resource options

### How It Works

Support is available to all members. If you're a member and need help, our team is here for you.
